Jainam Karania

AI/ML Enthusiast | Frontend Engineer
Mumbai, India | +91-9104955662 | jainamkarania05@gmail.com
Portfolio : https://jainam-karania.vercel.app/
/JainamKarania @JainamKarania

SKILLS

- **Programming Languages:** Python, JavaScript/TypeScript
- **ML & Data Libraries:** NumPy, Pandas, scikit-learn, PyTorch/TensorFlow
- **Generative AI & NLP:** LLM integration, prompt engineering, RAG pipelines, LangChain
- **Databases:** PostgreSQL, MySQL, relational schema design
- **Productivity & Collaboration Tools:** Google Workspace (Docs, Sheets, Slides, Drive), Git
- **Frontend :** React, Material UI, Jest, Tailwind CSS, Bootstrap, GSAP, HTML, CSS
- **Backend:** Node, JavaScript, TypeScript, SQL
- **AI tools :** ChatGPT, Claude, Gemini and Copilot
- **Cloud :** Google Cloud Platform, AWS

EXPERINCE

Frontend Engineer | Pure Connect Technologies, Ankleshwar *Aug 2024 – Feb 2025*

- Explored and integrated AI-assisted features into application workflows, reflecting a self-driven interest in applying AI tooling beyond standard frontend development.
- Built and debugged UI components in React with TypeScript, developing a habit of systematic testing and quality checks - a discipline carried directly into current ML project evaluation work.
- Collaborated with a cross-functional team to translate requirements into working features, strengthening the ability to scope and iterate on technical problems independently.

Webflow Developer | theCSSagency, Surat *Oct 2023 – Feb 2024*

- Took ownership of translating Figma designs into production-ready, responsive builds, learning new tools and platforms independently.
- Collaborated directly with designers to troubleshoot issues and incorporate feedback experience in structured problem-solving that transfers to debugging data and model pipelines.
- Followed structured naming and architecture conventions to keep projects organized, maintainable, and easy for others to pick up.

PROJECTS

Titanic Survival Prediction | [Repo Link] *Aug 2026 – Present*

- Trained and compared Logistic Regression and Random Forest classifiers on a Kaggle dataset, evaluating performance with accuracy, precision, and recall rather than accuracy alone.
- Implemented proper train/test splitting and handled missing data through appropriate imputation strategies, avoiding silent data-quality bugs.
- Identified and fixed a categorical imputation bug and a missing baseline model, improving the reliability of the evaluation pipeline.

House Price Prediction | [Repo Link] *Aug 2026 – Present*

- Built and evaluated regression models like Linear, Ridge, Lasso, ElasticNet with feature engineering and log-transformation, tuning hyperparameters via GridSearchCV and cross-validation achieved R^2 of 0.6455 on the final model.
- Applied regularization techniques to control overfitting and compared model performance using MAE and RMSE (0.4836 / 0.6815) instead of relying on a single metric.
- Debugged and resolved data-handling issues (variable shadowing) during feature preprocessing, reinforcing careful pipeline validation practices.

Financial Report Analysis | [Repo Link] *Jan 2026 – Present*

- Built an NLP pipeline to extract text from financial report PDFs and identify key metrics like Revenue, Net Income, EPS, Operating Margin using pattern-based extraction, validated with a custom precision/recall/F1 evaluation framework.
- Fine-tuned a T5 transformer model for financial report summarization using a proper train/validation/test split and evaluated outputs with ROUGE metrics instead of manual inspection.
- Expanded and diversified the training dataset to stress-test extraction accuracy against varied phrasing and incomplete data, improving robustness over an initial baseline version.

EDUCATION QUALIFICATIONS

- MCA | Jain University, Bangalore *CGPA: 7.43 (Sep 2021 to May 2023)*
- BCA | Shri Manilal Kadakia College, Ankleshwar *CGPA: 7.20 (Aug 2018 to May 2021)*

CERTIFICATIONS

GenAI Exchange Program powered by Google Cloud & Hack2Skill | Google – Virtual

- Ranked 14th out of 200,000+ candidates, completed 5 GenAI courses via Google Skills Boost and Hack2Skill.

Forward Program | McKinsey & Company — Virtual

- Completed McKinsey & Company's Forward Program, focused on problem-solving frameworks, critical thinking, and professional skill-building.
