/JainamKarania @JainamKarania

PROFILE SUMMARY

- I'm a frontend engineer with hands-on experience in React, JavaScript, TypeScript, and Node.js, plus freelance exposure to full-stack development. I'm currently expanding into AI/ML, using Python to build self-directed projects that integrate LLMs, RAG pipelines, and predictive models. I learn new stacks quickly and focus on shipping working solutions.

SKILLS

- **Programming Languages:** Python, JavaScript.
- **ML & Data Libraries:** NumPy, Pandas, scikit-learn, data handling, data cleaning, data visualization, feature engineering & selection, train/test splits, cross-validation, model evaluation metrics.
- **Generative AI & NLP:** LLM integration, prompt engineering, RAG pipelines, Lang Chain.
- **Databases:** PostgreSQL, MySQL.
- **Frontend :** React, Material UI, Tailwind CSS, Bootstrap, GSAP, HTML, CSS.
- **Backend:** Rest API, Optimization, API Integration, Microservices, Node, SQL, Advanced SQL, Authentication.
- **Testing :** Unit Testing, Performance Testing, System Testing, Integration Testing, Jest, etc.
- **AI tools :** ChatGPT, Claude, Gemini and Copilot.
- **Cloud :** Google Cloud Platform, AWS.
- **Documentation :** MS Excel, MS Word, MS PowerPoint, Google Docs, Google Sheets, etc.

EXPERIENCE

Full-Stack Developer (Agentic AI & ML Builds) | Local Freelancing, Ankleshwar *Feb 2025 - Present*

- Developed full-stack applications using React and Python, integrating third-party AI APIs to combine frontend, backend, and AI development.
- Worked on ML projects involving LLMs, RAG, embeddings, prompt engineering, and the Gemini API, developing practical AI applications.
- Studied AI agent concepts and helped automate applications using them, applying distinctive prompt engineering techniques to arrive at optimal solutions.
- Worked on GenAI applications, gaining hands-on experience with Google Cloud Platform and Google AI Studio.
- Designed, developed, and deployed multiple AI agents that help clients and users better understand and resolve issues with applications.

Frontend Engineer | Pure Connectt Technologies, Ankleshwar *Oct 2024 – Feb 2025*

- Applied high-level system design principles to full-stack and frontend applications.
- Explored and integrated AI-assisted features into application workflows, demonstrating a self-driven interest in applying AI tooling beyond standard frontend development.
- Designed and developed a job portal using React, TypeScript, Tailwind CSS, Framer Motion, and GSAP.
- Managed the entire website, collaborating with job consultants to understand and meet project requirements.
- Automated application workflows by building RAG-based AI agents.

Webflow Developer | TheCSSAgency, Surat *Oct 2023 – Feb 2024*

- Built various web applications using no-code platforms such as Webflow.
- Understood design requirements and developed Figma to Webflow migrations.
- Applied the Client-First methodology while building various web applications.
- Collaborated directly with designers to troubleshoot issues and incorporate feedback, building structured problem-solving skills that transfer to debugging data and model pipelines.
- Followed structured naming and architecture conventions to keep projects organized, maintainable, and easy for other developers to pick up.

PROJECTS

Wonders of India – Travel Agency Platform | [Live Link] *Dec 2025 to Present*

- Architected and built the frontend of a full-stack web application using React, JavaScript, Tailwind CSS, Material UI, and GSAP, delivering a responsive, animation-rich user experience.
- Set up PostgreSQL via Supabase for structured data storage and built REST APIs to handle data operations, enabling scalable and consistent access across the application.
- Integrated Supabase authentication and configured a secure PostgreSQL connection to enable a reliable booking flow tied to authenticated users, and built a RAG-based AI travel assistant that resolves user queries with optimal solutions.

Retail Customer Segmentation via RFM + Dimensionality Reduction | [Repo Link] *Aug 2026 to Present*

- Cleaned and transformed 541,909 raw e-commerce transaction records into a customer-level dataset of 4,338 customers using RFM (Recency, Frequency, Monetary) feature engineering, while handling cancellations, returns, and missing customer IDs.
- Applied PCA to reduce 5 engineered features to 2 interpretable components that explain 90% of the variance, identifying a primary 'customer engagement/value' axis and a secondary 'purchase pattern' axis.
- Diagnosed and corrected a feature-skew bug that caused one principal component to be dominated by a single outlier-heavy feature, validated the fix by tracing model output back to individual customer records, and compared PCA against t-SNE for non-linear structure discovery.

Financial Report Analysis | [Repo Link] *Jan 2026 – Present*

- Built an NLP pipeline to extract text from financial report PDFs and identify key metrics such as Revenue, Net Income, EPS, and Operating Margin using pattern-based extraction, validated with a custom precision/recall/F1 evaluation framework.
- Fine-tuned a T5 transformer model for financial report summarization using a train/validation/test split, and evaluated outputs with ROUGE metrics rather than relying on manual inspection.
- Expanded and diversified the training dataset to stress-test extraction accuracy against varied phrasing and incomplete data, improving robustness over the initial baseline.

EDUCATION QUALIFICATIONS

- MCA | Jain University, Bangalore *CGPA: 7.43 (Sep 2021 to May 2023)*
- BCA | Shri Manilal Kadakia College, Ankleshwar *CGPA: 7.20 (Aug 2018 to May 2021)*

COURSES & CERTIFICATIONS

GenAI Exchange Program powered by Google Cloud & Hack2Skill | [View Certificate]

- Ranked 14 out of 2 lakhs+ candidates enrolled in this program, completed 5 GenAI courses provided by Google via Google Skills Boost and Hack2skill.

Forward Program | McKinsey & Company | [View Certificate]

- Gained exposure to McKinsey's approach to strategic thinking, which sharpened how I frame and tackle ambiguous, real-world problems.

Machine Learning with Python: Foundations – LinkedIn Learning | [View Certificate]

- Built a solid grounding in ML fundamentals using Python, covering the core algorithms and concepts that most models are built on.

Machine Learning and AI Foundations: Clustering and Association - LinkedIn Learning | [View Certificate]

- Explored unsupervised learning techniques, learning how algorithms group data and uncover hidden patterns without labelled outcomes.

Data Science Foundations: Data Mining - LinkedIn Learning | [View Certificate]

- Learned the process of digging through raw data to extract meaningful patterns and insights that actually drive decisions.

Data Science on Google Cloud Platform: Designing Data Warehouses | [View Certificate]

- Learned how to design and structure data warehouses on GCP, understanding how large-scale data systems are built for analytics and gained practical knowledge of cloud-based data architecture.
